

Human-AI Workflow Blueprint

Shift handoff communication gets lost constantly

EXECUTIVE SUMMARY

This report examines a critical organizational challenge: shift handoff communication gets lost constantly.

Our analysis found that was built around a specific person's skills who left 3 years ago. Previous attempts to fix this addressed symptoms rather than root causes. We've designed a 4-part human-AI collaboration model to transform this workflow.

Key Findings

- *Universal consensus confirmed — this isn't one person's complaint, it's a shared organizational pain point.*
- *Root cause identified: was built around a specific person's skills who left 3 years ago.*
- *Multiple previous fix attempts addressed symptoms rather than the underlying structural issues.*
- *The real goal is faster delivery, but the current process has become an end in itself.*
- *A 4-part human-AI collaboration model can transform this workflow using delegating, supervising, approving modes.*

Recommended Approach

We recommend a 4-part collaboration model focused on data gathering and initial analysis, communication and stakeholder updates, quality assurance and compliance. AI fully handles 2 outcomes within defined guardrails. 1 outcome runs on AI with human oversight. Humans lead 1 outcome with AI assistance. Run a 2-week pilot with a single team.

THE PROBLEM

"Shift handoff communication gets lost constantly"

Why This Problem Matters

Universal agreement:

This isn't one person's complaint — it's a shared organizational pain point that everyone recognizes.

Strategic importance:

Human Machines | human-machines.com

This problem is important to the organization's core objectives and outcomes.

WHY IT PERSISTS

Was built around a specific person's skills who left 3 years ago. The healthcare industry had different pressures then, and the process reflected that reality. The belief that 'this is how it's always been done' has prevented anyone from questioning it. Meanwhile, people have built workarounds: a 'special request' process that most work goes through. The person who manages this process has built their role around its complexity. The real goal is faster delivery, but the current process has become an end in itself.

THE SOLUTION

Target Outcomes

1. Data gathering and initial analysis
2. Communication and stakeholder updates
3. Quality assurance and compliance
4. Process coordination and scheduling

Human-AI Collaboration Model

1. Data gathering and initial analysis Delegating Mode

AI handles:

Collects data from multiple sources, runs initial analysis, flags anomalies

Human handles:

Validates findings, adds context AI can't access, makes final calls

Why: AI excels at this type of work. The volume makes automation essential.

2. Communication and stakeholder updates Supervising Mode

AI handles:

Drafts communications, maintains consistency, handles routine updates

Human handles:

Reviews for tone, handles sensitive messages, manages relationships

Why: Routine enough for AI with this type of work. Human relationships matter here.

3. Quality assurance and compliance Approving Mode

AI handles:

Runs all standard checks, compares against requirements, documents findings

Human handles:

Reviews exceptions, makes judgment calls, signs off on final output

Why: Quality requires this type of work. Consistency is the key value-add.

4. Process coordination and scheduling

Delegating Mode

AI handles:

Manages calendars, resolves conflicts, sends reminders, tracks completion

Human handles:

Handles escalations, makes priority decisions, manages exceptions

Why: AI excels at this type of work. The volume makes automation essential.

MAKING IT HAPPEN

Change Management

Start with the team that feels the pain most. Get IT aligned before expanding.

Pilot Strategy

Run a 2-week pilot with a single team. Measure before and after, then scale based on results.

Continuous Improvement

Track time saved weekly. Feed human corrections back to improve AI recommendations. Review collaboration modes monthly and adjust based on what's working.

How You'll Know It's Working

- You identified clear metrics during our conversation — track these weekly and compare against your baseline.
- For delegated tasks like "data gathering and initial analysis", measure volume handled and exceptions flagged.
- For approval workflows, track review time and approval rates.

NEXT STEPS

You identified "shift handoff communication gets lost constantly" as a critical organizational challenge.

We traced its origins and found it was designed for constraints that no longer apply.

The 4-part solution assigns 2 delegating, 1 supervising, 1 approving collaboration modes to match each outcome with the right human-AI balance.

Start with the pilot approach outlined above, then scale based on what you learn.

Share this with your team

This blueprint was designed for collective action. Share it with stakeholders who need to understand the problem and the path forward.
